

# Uruk-Hai General Helmet Kit Instructions

## HELMET ASSEMBLY

1. First trim off all flash around base and cut out the eye holes. Sand interior until comfortable.
2. Carefully trim eye inserts (B) until they fit snugly into holes. There is a left and right eye insert so be careful to determine the correct one before trimming to make it fit. Putty up seam.
3. Test fit crest (A) as shown. Glue flat end of bracket (E) to crest, lining up the rivet on the front of the crest to the matching rivet on the bracket. Brackets are labeled for their position (L, R, C). Make sure that other end of bracket contacts the helmet surface.
4. Heat can be applied to helmet side of bracket to make it sit flush with helmet's surface. Once satisfied with fit, glue in place.
5. To attach cheek plates (C), line up side rivet on helmet with corresponding divot in plate. Back edge of plates should line up with edge of ear hole on helmet. Apply glue and clamp until dry.
6. Glue on extra rivets (D) across forehead and wherever you want to add extra "craftsmanship"
7. Add battle damage to your helmet by adding scratches, scrapes, sword blows and random cuts.
8. Paint entire helmet with primer, then a coat of Rustoleum Hammered Silver.
9. Apply a wash of black acrylic paint to bring out detail and knock down the shine of the paint.
10. Put a nice big white hand print in the center of the face with acrylic white paint. Blood stripes can be added to the tips of the crest.
11. Put on your helmet, grab your sword and lead your army to victory for Saruman!

## RECOMMENDED SUPPLIES

Sandpaper  
Spot filler putty  
2-Part epoxy  
White Spray Primer  
Rustoleum Hammered Silver Spray Paint  
Acrylic red, black and white  
Gloss Top coat
